

## IN THE UNITED STATES PATENT AND TRADEMEREK OFFICE

In re Patent Application of  
A. Dömling

Application No.: 10/520,791

Filed: January 8, 2005

Art Unit: 1654

For: TUBULYSIN CONJUGATES

Examiner: S.R. Gudibande

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

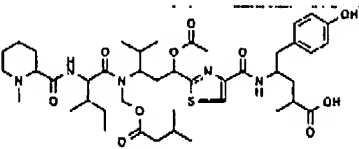

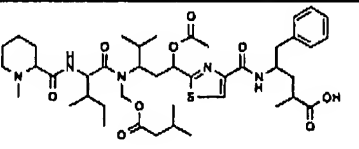

## DECLARATION UNDER 37 CFR 1.132

I, Alexander Dömling, declare as follows:

1. I am the Inventor on the above-identified patent application (referred to below as "the patent application"). I earned a Ph.D. degree in Chemistry from the Technical University in Munich in 1993. Subsequently, I was Vice-President Chemistry of Morphochem AG until 2003 and then in 2004 co-founded R&D Biopharmaceuticals GmbH. I am currently Associate Professor of Pharmacology at the University of Pittsburgh.

2. The following experimental work as detailed in paragraph 3 below and in the enclosed poster hand-out were conducted by me or persons working under my direction.

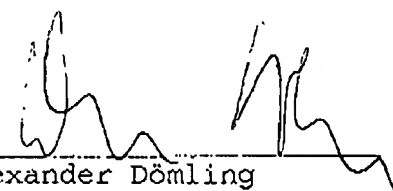

3. The tubulysin compounds identified in the table below were tested in an acid phosphatase assay for activity against human cancer cell lines of MCF-7 and KB-V1. The protocol of the acid phosphatase assay was as described in Yang et al., Anal. Biochem. 241 (1996) 103.

No	Structure	Code	MCF-7 IC50 [ng/ml]	KB-V1 IC50 [ng/ml]
1		Tubulysin A	0.7	1.0
2		Tubulysin D	0.5	0.3

4. I declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements are punishable by fine or imprisonment, or both, under § 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application of any patent issuing therein.

Date:

30/06/07

  
Alexander Dömling

Encls.:

- poster hand-out "Preclinical antitumor activity of Polymer, Tubulysin Nanoparticles in Human Colorectal Cancer Xenograft"

# Preclinical antitumor activity of Polymer-Tubulysin Nanoparticles in Human Colorectal Cancer Xenograft

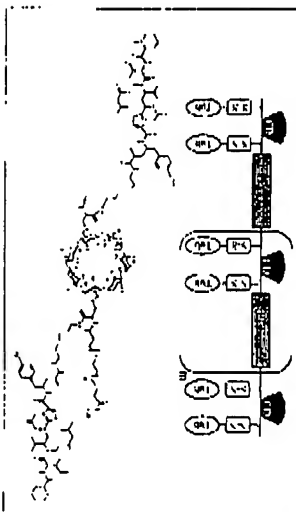

Paula Gunawan<sup>1</sup>, Ling Ma<sup>1</sup>, Gregory S. Jensen<sup>1</sup>, Wolfgang Richter<sup>2</sup>, Alexander Domling<sup>2</sup>, Jungyeon Hwang<sup>1</sup>, and Thomas Schliep<sup>1</sup>

## 1. Introduction

**Polymer.** Tetraulin nanoparticles are conjugates of a Teloxy-AT (1 tub A derivative) and a linear, syndiotactic-based polymer [C-2]. A similar polymer-camphorbornene conjugate is in clinical trials now for cancer treatment.<sup>10</sup> The polymer is soluble in water and has a molecular weight of about 100,000 g/mol. This A is a naturally occurring leucopetalide isolated from strains of myxobacteria. It is highly active against multiple cancer cell lines with an IC<sub>50</sub> in the low nM to pM concentration range. It acts as a antimetabolic agent by inhibiting protein synthesis.<sup>11</sup>

**Figure 1: Structure of CD<sub>3</sub>-SS-Tu**

## II. Characterization and Release Studies

The tub A derivative was incorporated to the polymer backbone with a loading of 12% by weight, as measured by HPLC. The particle size of the patient polymer was measured to be 3–10 nm while the CDPS-S-100 seed polymer had a particle size of 127 nm. The solubility of tub A in water was determined with a pH of 0.1 mg/mL at a neutral pH while that of CDPS-S-100 was found to be 100 times higher.

Release studies were performed by incubating CDP-S-S-Tub in both PBS and human plasma. The conjugate was found to be stable in both conditions for greater than 72 h at 37°C.

### III. *In vitro* Studies

The antiproliferative activity of CDP-S-S-Tub was evaluated in vitro in multiple human cancer cell lines (Table 1). The data shows that these conjugate maintains high antiproliferative activity.

Table 1: IC<sub>50</sub> values

Gel. no.	CDPS-Sub.	IC <sub>50</sub> (nM)	
		Sub A	Sub S
NCH-129 [Lys] cells	23.7	2.8	N/A
HT-29 [Colo] cells	4.9	1.3	4.4
A2780 (ova na.) cells	3	2.2	N/A

#### IV. MTD Studies

The maximum tolerated dose (MTD) of COP-S-S-Tub was determined in nude mice and found to be between 2 to 10 mg/kg (in Tub equivalents) without that of Tub A was not yet established due to 100% mortality at a dose of 0.3 mg/kg (Table 2).

Table 2: RTD studies

Group	n	Age (yr)	mean BW (kg)	# of 1 <sup>st</sup> AM Day of TR

**c TR, treatment related deaths**

## V. Efficacy Studies

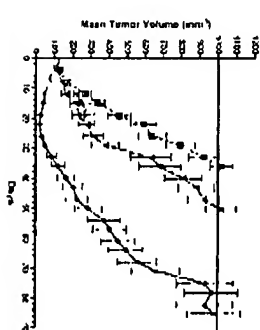

Preclinical efficacy was evaluated in nude mice bearing subcutaneously implanted H1-29 colorectal xenografts. Treatment with CDP-573-Tub was well tolerated, with no mortality and significant antitumor effect. It was better tolerated than vinorelbine and Tub A. Treatment with CDP-573-Tub resulted in higher number of regressions and significant increase in tumor growth delay compared to vinorelbine. Treatment with Tub A was proven to be toxic for the mice, causing 50% mortality and 26.8% maximum body weight loss on day 26 (Table 3 and Supplement 2).

**Table 3. Summary of antitumor activity (Erdpoint .TV = 1000 mm<sup>3</sup> or Day 80, whichever comes first)**

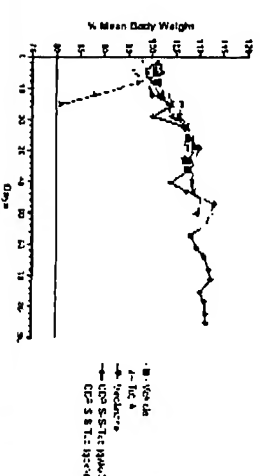

Group	Treatment Regimen <sup>a</sup>				Statistical Significance <sup>d</sup>										
	Agent	RT6K	Schedule	MTVCL Day 65 <sup>b</sup>	BW Na:fr	Median TTE	TC	MTG3	vs C1	vs G4	vs G5	PR	C3	ITS	TR

## VI. Conclusion

A poly(methylubiquitin conjugate CD<sub>2</sub>-SS-Tub, was synthesized and found to be highly soluble in water and stable in both PBS and flame plasma.

The following shows high entrepreneurial activity in the business sector.

The ratio of CO<sub>2</sub>-S-Sub was determined to be between 3 to 10 mykmg while the free drug Tub A, was severely toxic even at 0.1 mg/kg

Further studies of CD<sub>19</sub>-SS-10b at 3 mg/kg showed that it was well tolerated and produced substantial anti-CD activity during a 90-day study. By contrast, the free group Tub A, showed excessive toxicity, causing 50% mortality.

• Vincristine, a vinca alkaloid that inhibits tubulin polymerization by binding to the  $\alpha\beta$  binding site as T $\alpha$  D $\beta$ , was significantly less effective as antitumor agent compared to CC-2-S-S-Tub

## VII. Acknowledgments

We thank Piedmont Research Center for performing all of the animal studies.
